Allowable Subject Matter

Applicant has responded to the Examiner's rejection by merely canceling all claims that had been subject to rejection. The allowable claims are 1-9, 15, and new claims 21-26, which are directed to a process of making a molding using the a composition that includes the novel organosilicon compound set out in claim 1.

Herzig, U.S. patent # 5,151,473 mentions a disclosure wherein a reaction between 2-butyne-1,4-diol and an organohydrogensiloxane is reported. This is noteworthy because the aforementioned compound is a constitutional isomer of the alkynol employed by Applicant to form the organosilicon compound recited in claim 1. However, whereas the alkynol starting material of the instant invention reacts with the polysiloxane reactant through a moiety other than the carbon-carbon triple bond, 2-butyne-1,4-diol is hydrosilylated by the organohydrogensiloxane thereby producing a polymer featuring substituents structurally dissimilar from those exhibited in formula III. Lee et al., U.S. Patent # 3,989,667 is cited because it teaches another non-volatile siloxane-based catalyst inhibitor having substituents that contain both unsaturation and hydroxyl groups. The inventive inhibitors are not, however, anticipatory of the compound disclosed in claims 1, 5, and 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
